Brookfield to Invest up to $600 Million in ACME's Green Molecule Platform

Investment to support the development and construction of ACME's green molecule projects across India and the Middle East

Gurugram & Mumbai, 17 September 2026: Brookfield today announced that it will invest up to $600 million in ACME Cleantech Ventures ("ACME") to support the development and construction of an advanced pipeline of ACME's green molecule projects in India and the Middle East. ACME Cleantech Ventures is a UK-based privately held entity within the ACME Group ("the Group") which will be dedicated to the Group's green molecules projects.

Nawal Saini, Managing Partner and Head of Energy, South Asia and the Middle East, Brookfield said, "The demand for green molecules continues to grow as companies and governments seek scalable solutions to decarbonize while strengthening energy security. This investment marks Brookfield's entry into the green molecules sector in the region and combines our global scale and institutional capital with ACME's operating capabilities. ACME has an attractive project pipeline to capture the growing energy transition opportunity in India and the Middle East."

Manoj Upadhyay, Chairman of ACME Group said "Green molecules are creating a new supply chain for fuel and feedstock globally while strengthening the long-term energy security of nations. Brookfield's investment in our green molecules business is a strong endorsement of ACME's development and operating capabilities as well as the scale of the opportunity ahead. As we develop our world-class green ammonia and other green molecules projects, we aim to accelerate cost-competitive decarbonization and build a global platform serving customers in Asia, Europe and beyond. Our strong project portfolio, underpinned by long-term, bankable offtake contracts with blue-chip counterparties in India and globally creates a solid foundation for generating large-scale sustainable cash flows over the long term."

ACME's green molecules business is advancing the development of new green ammonia and green methanol facilities in India and Oman, further strengthening its position as a leading developer of scalable, cost-competitive green molecules solutions for domestic and global markets. It has secured strategic offtake partnerships with leading international and domestic counterparties, including Yara International of Norway, IHI Corporation of Japan, Mitsubishi Gas Chemicals, Solar Energy Corporation of India and Indian fertilizer companies such as IFFCO, Paradeep Phosphates Limited, Coromandel International Limited and Indorama India Private Limited – underscoring its credibility as a reliable, long-term supplier of clean energy solutions.

Brookfield is pursuing the investment in ACME through its Brookfield Global Transition Fund strategy, which is focused on investing in opportunities that accelerate the transition to a net-zero carbon economy. The investment will enable the development of green molecule projects as a scalable solution to help industries decarbonize their operations across Asia and Europe.

Brookfield has a significant presence in India's renewable energy sector with an energy portfolio comprising approximately 50 GW of wind and solar assets in operation and pipeline across leading platforms.

About Brookfield

Brookfield is a leading global investment firm with more than $1 trillion in assets under management that owns and operates real assets and essential service businesses that form the backbone of the global economy. We invest on behalf of institutions and individuals around the world across infrastructure, energy, private equity, real estate, and credit—sectors critical to supporting economic growth and productivity. With a heritage spanning more than a century and operations in over 30 countries, we deploy long-term, patient capital to build the foundational assets and businesses that power a more connected, resilient, and sustainable future—seeking to build long-term wealth for our clients while delivering strong risk-adjusted returns for our shareholders.

About ACME Green Molecules Business

ACME Group's Green Molecules Business is at the forefront of India's clean energy transition with a rapidly expanding global footprint. It has established a strong foundation with its operational green ammonia facility in Bikaner, India and is advancing its international ambitions through a world-class green ammonia project in Duqm, Oman. Building on its strong market leadership, ACME is also establishing new facilities in Odisha, India following its Green Ammonia Purchase Agreement (GAPA) with SECI, alongside a strategic joint venture with IHI Corporation, Japan and offtake contract with Mitsubishi Gas Chemicals. These projects place ACME Group as a key player in enabling scalable, cost-competitive green hydrogen and ammonia production for global markets. It has secured strategic offtake partnerships with leading global and domestic players, including Yara International (Norway), IHI Corporation (Japan), Mitsubishi Gas Chemicals and leading Indian fertilizer companies such as IFFCO, Paradeep Phosphates Limited, Coromandel International Limited and Indorama India Private Limited, reinforcing its credibility as a reliable supplier of green molecules. Guided by a clear vision to partner with industries in achieving their net zero goals, ACME's Green Molecules Business is focused on decarbonizing hard-to-abate sectors such as fertilizers, shipping, refineries, chemicals and heavy industries. Through integrated project development, strategic collaborations, and a commitment to innovation, the company aims to accelerate the global transition towards sustainable energy systems.
